Prodigy Anesthesia Quick Review

Gallstones/Gallbladder Disease

What are the two most common disorders related to the gallbladder?	1. Inflammation 2. Obstruction *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1494.*
Define the difference between cholecystitis and cholelithiasis.	Cholecystitis is the inflammation of the cystic duct or gallbladder, whereas cholelithiasis is the formation of gallstones. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1494.*
List risk factors associated with the development of cholelithiasis.	Middle age; obesity; female gender; rapid weight loss by obese individuals; oral contraceptive use; high dietary cholesterol; pancreatic, ileal, or gallbladder disease, and being of American Indian descent. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What are the two most common types of gallstones?	Cholesterol and pigmented. Cholesterol stones occur most frequently. Pigmented stones are seen less frequently, are associated with cirrhosis, and occur later in life. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1494.*
What are the hallmark manifestations of cholelithiasis?	Fatty food intolerance and right upper quadrant pain *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What are the more ambiguous symptoms associated with cholelithiasis?	Flatulence, heartburn, jaundice, pruritus, epigastric discomfort, food intolerance (mostly seen with the consumption of fats and cabbage) *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What is the treatment of choice for patients with cholelithiasis due to inflammation or obstruction?	Laparoscopic cholecystectomy *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
1. What is the term for pain caused from cholelithiasis? 2. What causes this pain?	1. Biliary colic 2. The pain occurs from gallstones becoming lodged in the common bile duct or cystic duct. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*

Gallstones/Gallbladder Disease

A patient will cholelithiasis exhibits jaundice. Where would you expect the gallstone to be located?	Common bile duct *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
Where does pain often radiate in patients with symptomatic cholelithiasis?	Pain often radiates to the mid-upper back. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What is the most common cause of cholecystitis?	The most common cause of cholecystitis occurs from one or more gallstones that become lodged in the cystic duct. The gallbladder becomes distended and inflamed as a result of this obstruction. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What are the symptoms associated with cholecystitis?	Pain that resembles cholelithiasis, leukocytosis, fever, abdominal muscle guarding, and rebound tenderness. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What two tests can confirm a diagnosis of cholecystitis?	Radioactive scan or cholangiography *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What are the mainstays of the medical management of cholecystitis?	Fluid and electrolyte replacement, fasting, pain control, and antibiotics in severe cases. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
What occurs when pressure builds against the distended wall of the gallbladder? What are the possible outcomes of this situation?	When pressure builds against the distended wall of the gallbladder, there is a decrease in blood flow. This can result in necrosis, ischemia, and gallbladder perforation. *McCance KL, Huether SE. Pathophysiology: The Biologic Basis for Disease in Adults and Children. Maryland Heights, MO: Mosby Elsevier; 2010: 1495.*
