Prodigy Anesthesia Quick Review

Interventional Radiology

List disorders in which interventional neuroradiology can be utilized.	Interventional neuroradiology is used to treat arteriovenous malformations (AVMs), arteriovenous fistulas (AVFs), tumors, and intracranial aneurysms. It is also used for stent placment and/or angioplasty to treat cerebral stenoses and to revascularize cerebral circulation following acute strokes. *Jaffe RA, Schmiesing CA, Golianu B. Anesthesiologist's Manual of Surgical Procedures. 5th ed. Philadelphia, PA: Wolters Kluwer Health, 2014: 1489.*
Interventional neuroradiology procedures can be grouped into 3 categories. What are these 3 categories.	1. Embolization 2. Aneurysm Therapy 3. Cerebral Revascularization *Jaffe RA, Schmiesing CA, Golianu B. Anesthesiologist's Manual of Surgical Procedures. 5th ed. Philadelphia, PA: Wolters Kluwer Health, 2014: 1489.*
List common side effects experienced with contrast agents used in interventional neuroradiology.	Itching, warm sensation, rash, pain, anxiety, urticaria, nausea, and vomiting. *Jaffe RA, Schmiesing CA, Golianu B. Anesthesiologist's Manual of Surgical Procedures. 5th ed. Philadelphia, PA: Wolters Kluwer Health, 2014: 1494.*
What are possible complications of interventional radiological procedures.	Allergic reactions to contrast medium, vasospasm, hemorrhage, occlusion of the vessel due to catheter injury of the vessel wall. *Jaffe RA, Schmiesing CA, Golianu B. Anesthesiologist's Manual of Surgical Procedures. 5th ed. Philadelphia, PA: Wolters Kluwer Health, 2014: 1494.*
What neurotoxic symptoms can occur with contrast agents used in interventional neuroradiology?	Decreased consciousness, blindness, aphasia, and hemiplegia. These symptoms will be masked in the anesthetized patient, however. *Jaffe RA, Schmiesing CA, Golianu B. Anesthesiologist's Manual of Surgical Procedures. 5th ed. Philadelphia, PA: Wolters Kluwer Health, 2014: 1494.*
